Configuring and Administering Microsoft SharePoint 2010

Days: 5

Format: Instructor-Led

Class Code 10174

Certification Exams:

Certification Track:

Recommended Course Sequence

Knowledge of prerequisites
noted below.

*Course content is subject to change
without notice.*

Course Description:

This course is intended for IT Professionals who are experienced Windows Server 2003 or 2008 administrators and are interested in learning how to administer SharePoint 2010. The course is also intended for part time Business Application Administrators (BAAs) who are engaged in the administering line-of-business (LOB) applications in conjunction with internal business customers.

Target Student:

The course teaches students how to install, configure and administer SharePoint, and also manage and monitor sites and users by using SharePoint 2010.

At Course Completion:

Upon successful completion of this course, students will be able to:

- Prepare for and install SharePoint 2010
- Configure the fundamental service and logical components of a SharePoint implementation
- Administer SharePoint using the user interface, the command line, and Windows PowerShell
- Manage content in Lists and Libraries
- Administer identities and authentication
- Secure content in SharePoint sites
- Manage customizations to a SharePoint implementation
- Configure SharePoint services and applications
- Configure SharePoint social networking features
- Manage SharePoint search
- Configure farms, servers, service applications, and web applications
- Install, upgrade, configure, and operate a SharePoint farm
- Configure high availability and recoverability
- Monitor and optimize SharePoint performance

Configuring and Administering Microsoft SharePoint 2010

Course Outline

Module 1: Introducing SharePoint 2010

The goal of this module is to enable students to prepare for and install the first server in a SharePoint 2010 farm.

Lessons
<ul style="list-style-type: none">■ Evaluate the Features of SharePoint 2010■ Prepare for SharePoint 2010■ Install SharePoint 2010■ Advanced Installation of SharePoint 2010
Lab : Install SharePoint 2010
<ul style="list-style-type: none">■ Exercise 1: Create Active Directory Accounts for SharePoint■ Exercise 2: Install SharePoint Server Prerequisites■ Exercise 3: Install SharePoint Server■ Exercise 4: Run the SharePoint Products Configuration Wizard■ Exercise 5: Configure the Farm with the Farm Configuration Wizard■ Exercise 6 (Optional): Install a Language Pack

Module 2: Creating a SharePoint 2010 Intranet

The goal of this module is to enable students to configure and administer the fundamental components of a SharePoint farm, including its configuration, logical structure, user-facing features, and underlying engine.

Lessons
<ul style="list-style-type: none">■ Perform Initial Farm Configuration■ Configure the SharePoint Logical Structure■ Explore the SharePoint Web Application and Physical Architecture
Lab : Create a SharePoint 2010 Intranet
<ul style="list-style-type: none">■ Exercise 1: Create a Web Application■ Exercise 2: Create a Site Collection■ Exercise 3: Create a Site Collection in a New Content Database

Configuring and Administering Microsoft SharePoint 2010

Module 3: Administering and Automating SharePoint

The goal of this module is to enable students to apply the full range of options for administering and automating SharePoint: Central Administration, STSADM, and Windows PowerShell. The module also introduces students to the logs, which are mentioned in several subsequent modules and are detailed in Module 14.

Lessons
<ul style="list-style-type: none">■ Configure Central Administration■ Administer SharePoint from the Command Line■ Automate SharePoint Operations with Windows PowerShell
Lab : Automate SharePoint with Windows PowerShell
<ul style="list-style-type: none">■ Exercise 1: Add SharePoint Functionality to Windows PowerShell■ Exercise 2: Delegate the Ability to Use Windows PowerShell to Manage SharePoint■ Exercise 3: Report Web and Site Collection Properties■ Exercise 4: Create Site Collections Using Windows PowerShell■ Exercise 5: Create and Update Items
Lab : Administer SharePoint with Stsadm
<ul style="list-style-type: none">■ Exercise 1: Execute Stsadm Commands

Module 4: Configuring Content Management

The goal of this module is to enable students to manage content (lists, libraries, items and documents)

Lessons
<ul style="list-style-type: none">■ Optimize Content Storage and Access■ Manage Site Content Types and Site Columns■ Configure the Managed Metadata Service
Lab : Configuring List Throttling and Remote BLOB Storage
<ul style="list-style-type: none">■ Exercise 1: Configure List Throttling■ Exercise 2: Enable FILESTREAM and Provision the RBS Data Store■ Exercise 3: Install RBS on All SharePoint Web and Application Servers■ Exercise 4: Configure the Blob Size Threshold for RBS
Lab : Configure Managed Metadata
<ul style="list-style-type: none">■ Exercise 1: Configure and Implement Managed Metadata

Configuring and Administering Microsoft SharePoint 2010

Module 5: Configuring Authentication

The goal of this module is to enable students to administer authentication to SharePoint web applications.

Lessons
<ul style="list-style-type: none">■ Classic SharePoint Authentication Providers■ Federated Authentication
Lab : Configuring Custom Authentication
<ul style="list-style-type: none">■ Exercise 1: Create the ASP.NET Membership Database■ Exercise 2: Create a Web Applications that Uses Claim Based Authentication
Lab : Configuring Secure Store
<ul style="list-style-type: none">■ Exercise 1: Create User Accounts for Access to External Data■ Exercise 2: Configure Secure Store Services■ Exercise 3: Configure Secure Store Unattended Accounts

Module 6: Securing Content

The goal of this module is to enable students to manage security of SharePoint content within a Web application.

Lessons
<ul style="list-style-type: none">■ Administer SharePoint Users and Groups■ Implement SharePoint Roles and Role Assignments■ Secure and Audit SharePoint Content
Lab : Configuring Security for SharePoint Content
<ul style="list-style-type: none">■ Exercise 1: Managing SharePoint Groups■ Exercise 2: Creating Custom Permission Levels■ Exercise 3: Managing List and ListItem Permission Inheritance■ Exercise 4: Create a Web Application Policy

Configuring and Administering Microsoft SharePoint 2010

Module 7: Managing SharePoint Customizations

The goal of this module is to enable students to manage customizations to the SharePoint environment.

Lessons
<ul style="list-style-type: none">■ Customize SharePoint■ Deploy and Manage Features and Solutions■ Configure Sandboxed Solutions
Lab : Administering Features and Solutions
<ul style="list-style-type: none">■ Exercise 1: Administering Features■ Exercise 2: Administering Solutions
Lab : Administering Sandboxed Solutions
<ul style="list-style-type: none">■ Exercise 1: Administering SandBoxed Solutions■ Exercise 2: Modifying SandBoxed Solutions Timer Jobs■ Exercise 3: Configuring Sandbox Points
Lab : Administering the Developer Dashboard
<ul style="list-style-type: none">■ Configure the Developer Dashboard

Module 8: Configuring and Securing SharePoint Services and Applications

The goal of this module is to enable students to manage the SharePoint service as a whole, as well as individual services and service applications.

Lessons
<ul style="list-style-type: none">■ Secure the Enterprise SharePoint Service■ Secure and Isolate Web Applications■ Configure Service Applications
Lab : Administer SharePoint Services
<ul style="list-style-type: none">■ Exercise 1: Administer SharePoint Services■ Exercise 2: Administer SharePoint Windows Services
Lab : Configure Application Security
<ul style="list-style-type: none">■ Exercise 1: Configure Web Application and Application Pool Security■ Exercise 2: Configure SSL Security (Optional)
Lab : Administer Service Applications
<ul style="list-style-type: none">■ Exercise 1: Explore Service Applications■ Exercise 2: Create a Service Application

Configuring and Administering Microsoft SharePoint 2010

Module 9: Implementing Productivity Service Applications

The goal of this module is to enable students to configure specific service applications.

Lessons
<ul style="list-style-type: none">■ Implement Business Connectivity Services■ Implement Excel Services Application■ Implement PerformancePoint Services■ Implement InfoPath Services■ Implement Visio Services■ Implement Access Services■ Implement Office Web Apps
Lab : Implement Office Web Apps
<ul style="list-style-type: none">■ Exercise 1: Install and Configure Office Web Apps■ Exercise 2: Configure and Test the Office Web Apps in a Document Library

Module 10: User Profiles and Social Networking

The goal of this module is to enable students to manage user profiles, My Sites, and social content

Lessons
<ul style="list-style-type: none">■ Configure User Profiles■ Implement SharePoint 2010 Social Networking Features
Lab : Configuring User Profiles
<ul style="list-style-type: none">■ Exercise 1: Creating a Service Application■ Exercise 2: Configuring User Profiles■ Exercise 3: Connecting BDC to SharePoint Profiles■ Exercise 4: Administering ForeFront Identity Manager
Lab : Configuring My Sites
<ul style="list-style-type: none">■ Exercise 1: Configuring My Sites■ Exercise 2: Creating a My Site■ Exercise 2: Updating a User Profile■ Exercise 3: Administering Colleagues■ Exercise 4: Configuring Personal and Shared Documents■ Exercise 5: Creating A My Site Personal Blog■ Exercise 6: Administering My Tags and Notes

Configuring and Administering Microsoft SharePoint 2010

Module 11: Administering and Configuring SharePoint Search

The goal of this module is to enable students to configure SharePoint Search.

Lessons
<ul style="list-style-type: none">■ Configure Search■ Refine Search
Lab : Configure Search
<ul style="list-style-type: none">■ Exercise 1: Create and Configure A Content Source■ Exercise 2: Configure Search Settings■ Exercise 3: Add and Configure A Search Scope
Lab : Refine Search
<ul style="list-style-type: none">■ Exercise 1: Configure Relevance■ Exercise 2: Create Keywords and Best Bets■ Exercise 3: Configure a Thesaurus■ Exercise 4: Configure Noise Words

Module 12: Installing and Upgrading to SharePoint 2010

The goal of this module is to enable students to install and upgrade to SharePoint 2010 in a variety of scenarios, and to keep SharePoint 2010 up-to-date.

Lessons
<ul style="list-style-type: none">■ Install SharePoint Servers and Farms■ Upgrade to SharePoint 2010■ Monitor and Troubleshoot installation and upgrade■ Update SharePoint
Lab : Implementing Advanced SharePoint 2010 Installations
<ul style="list-style-type: none">■ Exercise 1: Create a Multi-Server Farm■ Exercise 2: Configure SharePoint Server Roles■ Exercise 3: Install Language Packs
Lab : Scripting a SharePoint 2010 Install
<ul style="list-style-type: none">■ Exercise 1: Creating a SharePoint 2010 Install Script■ Exercise 2: Configuring SharePoint 2010 via Scripts■ Exercise 3: Creating a SharePoint 2010 Service Applications Script
Lab : Implementing SharePoint 2007 Upgrade Requirements
<ul style="list-style-type: none">■ Exercise 1: Defragmenting Content Databases■ Exercise 2: Migrating Content Between Databases■ Exercise 3: Truncating and Backing Up Content Databases■ Exercise 4: Installing Cumulative Update (Oct 2009)■ Exercise 5: Analyzing the Upgrade
Lab : Upgrading SharePoint 2007 to SharePoint 2010
<ul style="list-style-type: none">■ Exercise 1: Upgrading the SharePoint Binaries■ Exercise 2: Implement a Database Attach Upgrade■ Exercise 3: Implementing a Visual Upgrade

Configuring and Administering Microsoft SharePoint 2010

Module 13: Implementing Business Continuity

The goal of this module is to enable students to configure business continuity for SharePoint

Lessons
<ul style="list-style-type: none">■ Configure High availability■ Backup and Restore SharePoint
Lab : Implement a Backup Strategy
<ul style="list-style-type: none">■ Exercise 1: Implement a Central Administration Backup Strategy■ Exercise 2: Implement a Windows PowerShell Backup Strategy
Lab : Implement a Restore Strategy
<ul style="list-style-type: none">■ Exercise 1: Implement a Central Administration Restore Strategy■ Exercise 2: Perform a Partial Restore

Module 14: Monitoring and Optimizing SharePoint Performance

The goal of this module is to enable students to monitor SharePoint performance, health, and usage, and to identify and remediate performance and health problems.

Lessons
<ul style="list-style-type: none">■ Configure High availability■ Backup and Restore SharePoint
Lab : Configure Diagnostic Logging
<ul style="list-style-type: none">■ Configure Diagnostic Logging
Lab : Administer Logs with the ULS Viewer
<ul style="list-style-type: none">■ Troubleshoot Correlation Errors
Lab : Configure Health Analyzer Rules
<ul style="list-style-type: none">■ Configure Health Analyzer Rules
Lab : Build Reports Using the SharePoint Logging Database
<ul style="list-style-type: none">■ Exercise 1: Configure the Logging Database■ Exercise 2: Write Reports with the Logging Database.
