

BUILDING TRAINING SOLUTIONS
FOR THE IT WORLD

Web Application Development in Visual Studio 2005

Days: 5
Format: Instructor-Led
Class Code: 5310
Certification Exams: None
Certification Track: None

Recommended Course Sequence

Knowledge of prerequisites
noted below.

*Course content is subject to change
without notice.*

Course Description:

In this course, you'll learn how to use Visual Studio 2005 to build ASP.NET 2.0 Web pages and XML Web services. You'll gain an understanding of the new architecture behind ASP.NET 2.0 and how to use the new server controls. You'll learn to create consistent web sites using Master Pages, to improve performance with output caching, add membership features, configure and deploy ASP.NET applications, to authenticate users and limit their access to resources, direct users using new Site Navigation tools and to handle multi-user data access conflicts.

Target Student:

This course is intended for developers who are writing solutions using Microsoft application development technologies. This course assumes that the students are familiar with Hypertext Markup Language (HTML), client-side and server-side scripting, Visual Studio 2003 or Visual Studio 2005 and the Visual C# or VB .NET programming language. It is intended to be a general introduction to ASP.NET 2.0-based web development and does not assume previous ASP.NET development experience.

The Web developer is responsible for the design and implementation of a Web application and/or a Web solution. Typically, these individuals perform the following functions:

- Assist with the creation of functional specifications.
- Design and develop user interfaces (UIs).
- Create ASP.NET Pages.
- Write Web Forms applications.
- Create and test prototypes.

Prerequisites:

Before attending this course, students must meet the following prerequisites:

- Ability to create HTML pages with tables, images, and forms.
- Experience using a scripting language, such as Microsoft Visual Basic® Scripting Edition or JavaScript.
- Familiarity with Visual C# or VB .NET and Visual Studio 2003 or 2005.
- Familiarity with the .NET Framework.

Delivery Method:

Instructor led, group-paced, classroom-delivery learning model with structured hands-on activities.

Web Application Development in Visual Studio 2005

At Course Completion:

Upon successful completion of this course, students will be able to:

- Use ASP.NET server controls to generate HTML and to execute event procedures
- Promote consistency within your web site through Master Pages
- Retrieve and manipulate data using ADO.NET
- Display and edit data quickly and easily using new data binding features
- Use Membership features to manage your Web users
- Use new Site Navigation controls to direct users within your site
- Redirect users on unhandled errors
- Use the Trace object for page-level monitoring
- Use Web Events to provide programmatic health monitoring
- Create new user-defined controls
- Create and consume XML Web Services
- Take advantage of ASP.NET's versatile output caching to increase performance
- Add scalability and reliability by setting up an out-of-process session state server
- Create a Web Setup project in Visual Studio to build a deployment package that takes advantage of Windows Installer
- Call an XML Web service from an ASP.NET Web application and incorporate the returned data into a Web application.

Course Outline

Module 1: Introduction to ASP.NET
<ul style="list-style-type: none">■ A Review of Classic ASP■ ASP.NET Web Applications■ Rendering HTML with Server Controls■ Data Binding in ASP.NET 2.0
Module 2: Working with Controls
<ul style="list-style-type: none">■ Introduction to Web Controls■ Simple Input Controls■ Hyperlink and Button Controls■ List Controls■ Controlling Focus
Module 3: Using Rich Server Controls
<ul style="list-style-type: none">■ Introduction to Rich Controls■ The Calendar Control■ The AdRotator Control■ The XML Control
Module 4: Accessing Data
<ul style="list-style-type: none">■ Overview of ADO.NET■ Connecting to Data■ Executing Commands■ Working with Data■ Choosing an ADO.NET Provider

Web Application Development in Visual Studio 2005

Module 5: Data Binding
<ul style="list-style-type: none">■ Introducing Data Source Controls■ Reading and Write Data Using the SqlDataSource Control■ Displaying and Editing Middle-Tier Data using the ObjectDataSource Control■ Displaying XML Data Using the XmlDataSource Control
Module 6: Site Navigation
<ul style="list-style-type: none">■ ASP.NET Site Navigation■ Creating an XML Site Map File■ Site Navigation Controls■ Using the Site Navigation API■ URL Mapping■ Security Trimming
Module 7: Displaying Data with the GridView Control
<ul style="list-style-type: none">■ Introducing the GridView Control■ Filter Data in the GridView Control■ Allow Users to Select from a DropDownList in the Grid■ Add a Hyperlink to the Grid■ Deleting a Row and Handling Errors
Module 8: Configuration
<ul style="list-style-type: none">■ Configuration Overview■ Using the Web Site Administration Tool■ Programming Configuration Files■ Encrypting Configuration Sections
Module 9: Validating User Input
<ul style="list-style-type: none">■ Overview of ASP.NET Validation Controls■ Using the Simple Validators■ Using the Complex Validators■ Summarizing Results with the Validation Summary Control■ Separating Validation into Validation Groups
Module 10: Themes and Master Pages
<ul style="list-style-type: none">■ Creating a Consistent Web Site■ ASP.NET 2.0 Themes■ Master Pages
Module 11: Creating New Controls
<ul style="list-style-type: none">■ Two Kinds of User-Defined Controls■ Creating a User Control■ A More Complex User Control■ Creating a Custom Control■ Investigating the StateDropDownList Control

Web Application Development in Visual Studio 2005

Module 12: Managing State
<ul style="list-style-type: none">■ Preserving State in Web Applications■ Page-Level State■ Using Cookies to Preserve State■ ASP.NET Session State■ Storing Objects in Session State■ Configuring Session State■ Setting Up an Out-of-Process State Server■ Storing Session State in SQL Server■ Using Cookieless Session IDs■ Application State
Module 13: Managing Users with ASP.NET's Membership Features
<ul style="list-style-type: none">■ Introduction to Membership and Roles■ Using Membership Controls■ Writing Code to Interact with Membership and Roles
Module 14: Improving Performance with Output Caching
<ul style="list-style-type: none">■ The Importance of Caching■ Declarative Page Output Caching■ Caching Page Fragments■ Post-Cache Substitution■ Caching Configuration
Module 15: Debugging ASP.NET Applications
<ul style="list-style-type: none">■ Using the Visual Studio Debugging Features■ Handling Errors and Redirecting Users■ Debugging Client-Side Script■ Debugging SQL Server Code
Module 16: Tracing
<ul style="list-style-type: none">■ Using Page-Level Tracing■ Using Application-Level Tracing■ Using Web Events■ Viewing Information With the Web Development Helper
Module 17: Creating and Consuming Web Services
<ul style="list-style-type: none">■ The Motivation for XML Web Services■ Creating an XML Web Service with Visual Studio■ Designing XML Web Services■ Creating Web Service Consumers■ Discovering Web Services Using UDDI
