

BUILDING TRAINING SOLUTIONS
FOR THE IT WORLD

Deploying Windows Server 2008

Days:	3
Format:	Instructor-Led
Class Code	6418
Certification Exams:	None
Certification Track:	None

Recommended Course Sequence

Knowledge of prerequisites
noted below.

*Course content is subject to change
without notice.*

Course Description:

This 3-day instructor-led course provides students with an understanding of migrating and deploying Windows Server 2008 including installation, configuration, and upgrading. Special emphasis is given to upgrading common server configurations and using the Microsoft Deployment Toolkit.

Target Student:

This course is intended for IT professionals who are experienced with Windows Server 2000 or Windows Server 2003, and who hold an MCSE or MCSA certification and/or equivalent knowledge.

Prerequisites:

- On-the-job experience in planning, implementing, managing, or supporting
- Microsoft Windows Server NT 4.0, 2000 or 2003, including Active Directory and Network Infrastructure.
- Working knowledge of networking, for example, TCP/IP and Domain Name System (DNS).
- Experience with a Microsoft Windows Server 2003 Active Directory and Network Infrastructure.
- Experience with implementing security for a Microsoft Windows Server 2003 Network.
- Experience installing, configuring, and administering Microsoft Windows 2003, Windows XP Professional, or Windows Vista.

At Course Completion:

After completing this course, students will be able to:

- Install Windows Server 2008.
- Install Windows Server 2008 Server Core.
- Configure Windows Server Core.
- Add and configure Windows Server Core roles.
- Add the Backup feature to Windows Server Core.
- Manage Windows Server Core.
- Create an answer file for use with Dcpromo.
- Create an Unattend file to automate RODC installation.
- Deploy a Read-Only Domain Controller (RODC) using an answer file.
- Install and configure Windows Deployment Services (WDS).
- Create operating system images in WDS.
- Add components like language packs to an image.
- Use an Unattend file with WDS.
- Configure custom computer naming for large scale WDS deployments.

Deploying Windows Server 2008

- Deploy images with WDS.
- Install Microsoft Deployment Toolkit (MDT).
- Configure MDT.
- Create an MDT build.
- Create MDT deployment points.
- Perform a Lite Touch installation using MDT.
- Prepare a Windows Server 2003 forest for upgrade to Windows Server 2008.
- Prepare a Windows Server 2003 domain for upgrade to Windows Server 2008.
- Install a domain controller in an existing domain using the Windows interface.
- Install a domain controller in an existing domain using the Command Line.
- Describe considerations for upgrading file and print servers.
- Describe considerations for upgrading Web and application servers.
- Describe considerations for upgrading remote infrastructure servers.
- Install and configure the file and print server roles.
- Create and replicate a Distributed File System (DFS) namespace.
- Schedule a backup.
- Migrate a printer.
- Export an application and configuration from an IIS 6.0 server.
- Configure IIS 7.0 on Windows Server 2008
- Import a configuration onto Windows Server 2008
- Enable Remote Desktop and remote administration of Windows Firewall.
- Install and configure BitLocker Drive Encryption (BDE) and BDE Remote Admin Tool.
- Configure admin role separation on an RODC.
- Configure Distributed File System Replication (DFS-R).
- Migrate a Windows NT 4.0 server to a virtual machine.

Course Outline

Module 1: Windows Server 2008 Installation and Configuration

This module focuses on installation options and requirements for Windows Server 2008, including deploying Windows Server Core. This module also covers using Key Management Service (KMS) and Multiple Activation Keys (MAK) to implement a volume license strategy.

Lessons
<ul style="list-style-type: none">■ Windows Server 2008 Setup Improvements and Requirements■ Windows Server 2008 Server Core Installation■ Implement a Volume Licensing Strategy using KMS and MAK
Lab: Install Windows Server 2008
<ul style="list-style-type: none">■ Install Windows Server 2008.■ Install Windows Server Core 2008.

Deploying Windows Server 2008

Module 2: Windows Server Core 2008 Configuration

This module focuses on Windows Server Core 2008 configuration. Basic Server Core configuration including setting the Administrator password and server TCP/IP configuration are covered in this module.

Lessons
<ul style="list-style-type: none">■ Server Core Basic Configuration■ Configuring Server Core Roles
Lab: Configure Windows Server Core 2008
<ul style="list-style-type: none">■ Configure Windows Server Core■ Add and configure Windows Server Core roles■ Add the Backup feature to Windows Server Core■ Manage Windows Server Core

Module 3: Windows Server 2008 Unattended Installation

This module describes using Unattend.xml files to install Windows Server 2008. This module also covers creating a network deployment infrastructure for unattended installation and unattended domain controller installation.

Lessons
<ul style="list-style-type: none">■ Unattended Windows Server 2008 Installation■ Unattended Domain Controller Installation
Lab: Install Active Directory on Server Core Using an Unattended File
<ul style="list-style-type: none">■ Create an answer file for use with Dcpromo.
Lab: Deploy an RODC in a Remote Infrastructure Using an Unattended File
<ul style="list-style-type: none">■ Create an Unattended file to automate RODC installation.■ Deploy an RODC using an answer file.

Module 4: Using Windows Deployment Services

This module focuses on using Windows Deployment Services and the new WIM image format to create and deploy custom system images.

Lessons
<ul style="list-style-type: none">■ Windows Deployment Services■ Working with the WIM Format
Lab: Working with Windows Deployment Services
<ul style="list-style-type: none">■ Install and configure Windows Deployment Services.■ Create operating system images in WDS.■ Add components like language packs to an image.■ Use an Unattended file with WDS.■ Configure custom computer naming for large scale WDS deployments.■ Deploy images with WDS.

Deploying Windows Server 2008

Module 5: Microsoft Deployment Toolkit

This module introduces the Microsoft Deployment Toolkit as a tool for low-touch operating system deployment. This module also covers creating custom system images for common server configurations.

Lessons
<ul style="list-style-type: none">■ Introduction to the Microsoft Deployment Toolkit■ Using the Microsoft Deployment Toolkit
Lab: Installing, Configuring, and Using MDT
<ul style="list-style-type: none">■ Install Microsoft Deployment Toolkit■ Configure Microsoft Deployment Toolkit■ Create an MDT build■ Create MDT deployment points■ Perform a Lite Touch installation using MDT

Module 6: Upgrading and Migrating Active Directory

This module provides prescriptive guidance for upgrading and migrating active directory from Windows Server 2003 to Windows Server 2008. This module also covers upgrading specific Active Directory-related services including DNS, Certificate Services, IPSec configuration, and GPO objects. This module provides best-practices for Active Directory upgrades.

Lessons
<ul style="list-style-type: none">■ Windows Server 2008 Upgrade Overview■ Upgrading Windows Server 2003 Domain Controllers to Windows Server 2008■ Active Directory Upgrade Sequence
Lab: Preparing the Active Directory Environment for Windows Server 2008
<ul style="list-style-type: none">■ Prepare a Windows Server 2003 forest for upgrade to Windows Server 2008.■ Prepare a Windows Server 2003 domain for upgrade to Windows Server 2008.
Lab: Installing an Additional Windows Server 2008 Domain Controller
<ul style="list-style-type: none">■ Install a domain controller in an existing domain using the Windows interface.■ Install a domain controller in an existing domain using the Command Line.

Deploying Windows Server 2008

Module 7: Upgrading File and Print, Web, and Remote Infrastructure Servers

This module provides prescriptive guidance for upgrading and migrating file and print servers from Windows Server 2003 to Windows Server 2008. This module also includes guidance for upgrading and migrating application and Web servers from Windows Server 2003 to Windows Server 2008. This module also provides guidance for upgrading and migrating remote servers from Windows Server 2003 to Windows Server 2008.

Lessons
<ul style="list-style-type: none">■ Upgrading File and Print Servers■ Upgrading Web and Application Servers■ Upgrading Remote Infrastructure Servers
Lab: Upgrading a Windows Server 2003 File and Print Server
<ul style="list-style-type: none">■ Install and configure the file and print server roles■ Create and replicate a DFS namespace■ Schedule a backup■ Migrate a printer
Lab: Upgrading a Windows Server 2003 Web Server to Windows Server 2008 and IIS 7.0
<ul style="list-style-type: none">■ Export an application and configuration from an IIS 6.0 server■ Configure IIS 7.0 on Windows Server 2008■ Import a configuration onto Windows Server 2008
Lab: Prepare a Windows Server 2008 Server Core Installation for use as a Remote Infrastructure Server
<ul style="list-style-type: none">■ Enable Remote Desktop and remote administration of Windows Firewall■ Install and configure BitLocker Drive Encryption (BDE) and BDE Remote Admin Tool■ Configure admin role separation on a Read-Only Domain Controller■ Configure Distributed File System Replication (DFS-R)

Deploying Windows Server 2008

Module 8: Migrating Workloads to Microsoft Virtual Machines

This module provides guidance for migrating existing workloads to a virtual machine environment using either Microsoft Virtual Server 2005 R2 SP1 or the Windows Server virtualization role of Windows Server 2008.

Lessons
<ul style="list-style-type: none">■ Microsoft Server Virtualization■ Migrating Workloads to Microsoft Virtual Machines
Lab: Migrating Workloads to Microsoft Virtual Server Using VSMT
<ul style="list-style-type: none">■ Migrate a Windows NT 4.0 server to a virtual machine.

Module 9: Configuring Windows Server 2008 for Performance

This module describes considerations for hardware selection, and workload-specific tuning considerations.

Lessons
<ul style="list-style-type: none">■ Hardware Considerations■ Workload Considerations
